

Create a simple Movie Ticket Booking System.

The system should collect and manage the following details:

1. Customer Details – Customer name, mobile number, and email.
2. Movie Details – Movie name, language, genre, and duration.
3. Show Details – Theatre name, show date, and show time.
4. Seat Selection – Allow the customer to select available seats and display selected seats.
5. Ticket Price – Calculate the total ticket price based on the number of selected seats and ticket price.

The system should display the booking details and total amount clearly after the booking is completed.
