

Create a simple, neat, and college-level flowchart for a Movie Ticket Booking System.

The flowchart should follow this sequence:

Start

Enter Customer Details

Enter Movie Details

Enter Show Details

Display Available Seats

Select Available Seats

Display Selected Seats

Enter Ticket Price

Count Selected Seats

Calculate Total Amount

(Total Amount = Number of Selected Seats × Ticket Price)

Display Complete Booking Details

Display Total Amount

End

Use standard flowchart symbols:

- Oval for Start and End
- Parallelogram for input/output
- Rectangle for processing/calculation
- Diamond for decision where required
- Arrows to show the flow

Make the flowchart clean, simple, properly connected, and suitable for a BCA college project. Use short labels inside each symbol and make all text clearly readable.
